

Do you have asthma and allergies?

Researchers at the University of Kentucky are inviting you to participate in a study to see if your lung tissue temperature increases when exposed to something you are allergic to such as ragweed, house dust mite, or cat dander.

You may be eligible to participate if you:

- Are between the ages of 18-50;
- Have mild controlled asthma; and
- Have allergies.

Participants will be compensated for taking part in this study.
