UK CURE COVID-19 Pilot Program

Pilot projects are available for COVID-19 related research projects across the entire research spectrum from foundational basic science research to population level outcomes research. Emphasis is on applications that have an impact on the evolving COVID-19 pandemic in the following areas:

- Basic science approaches on SARS-CoV-2 and its receptor, animal models of COVID-19, risk factors and their direct association with COVID-19
- Clinical research involving the diagnosis, treatment, prevention and a better understanding of the epidemiology of COVID-19,
- Community impact of COVID-19.

It is likely that these studies will promote team science and involve in the investigating team a professional with knowledge of the pandemic and/or its causative agent SARS-CoV-2 (e.g. clinician, epidemiologist, etc).

Project Priority

- High impact on expanding knowledge or developing new knowledge on the COVID-19 pandemic and SARS-CoV-2
- It is an expectation that these funds will be used to obtain preliminary data for an extramural grant submission related to COVID-19/SARS-CoV-2.
- Projects that do not directly address or relate to COVID-19/SARS-CoV-2 will not be considered within this solicitation.

Eligibility

- Full time faculty (all title series including regular, research, clinical and special) at the University of Kentucky.

Required documents (combined into a single PDF)

- Short research description (2 page max) including the following:
  - Significance
    - Explain the importance of the problem or critical barrier to progress in the COVID-19/SARS-CoV-2 field that the proposed project addresses.
    - Describe the background to the study, including Preliminary Studies, if available. Discuss the PI’s experience pertinent to this application. Preliminary data and experience, even if not directly related to COVID-19/SARS-CoV-2, can be an essential part of a research grant application and help to establish the likelihood of success of the proposed project.
  - Approach
    - Describe the overall strategy, methodology, and analyses to be used to accomplish the specific aims of the project. Include how the data will be collected, analyzed, and interpreted as well as any resource sharing plans as appropriate. COVID-19 is a highly infectious disease. If the proposal involves human subjects, samples or other situations that could increase risk to research personnel, clinical staff of patients, describe how these risks will be mitigated.
  - Future direction
    - Explain how the current research will add new knowledge about SARS-CoV-2 and the
COVID-19 pandemic and how the results of these studies will be communicated and disseminated. Describe how these data could contribute/strengthen an external research application, including specific funding opportunities.

- References cited (not included in 2 pages)
- IRB / IACUC approval letter, if available
- NIH biosketch for faculty listed as study personnel. If an NIH biosketch is not available, a CV of less than 6 pages will be accepted.
- **Budget and budget justification**
  - We are not setting a maximal dollar amount for these proposals. We anticipate that some proposals will be submitted that require relatively small dollar amounts (i.e. <$10,000) for targeted projects. Others may require larger amounts (e.g. up to $25,000) and clinical trials or long-term studies with animals may require more.
  - Budgets will be scrutinized and highest priority will be given to small, efficient projects that will have a significant impact.
  - If support for technical personnel is requested, it will be assumed that the personnel are deployed in appropriated research duties and need release time.
  - The use of the following forms are REQUIRED: PHS 398 Form Page 4 and Page 5 "Detailed Budget for the Initial Period" found [here](#).
  - If CCTS services are needed, please contact Joel Thompson (Joel.Thompson@uky.edu; 859-323-7939) before applying to use any CCTS services.

- Assurance that the PI and team have the ability to be on campus or in the community to perform the outlined study and have sufficient protected time to complete the research. This may require a Letter of support from the Department Chair/ immediate supervisor.
- An appendix of other relevant information such as references.

Please submit your application using the following Application link:

[https://redcap.uky.edu/redcap/surveys/?s=XLA4CAXR4H](https://redcap.uky.edu/redcap/surveys/?s=XLA4CAXR4H)

**Review Criteria**

Funding decisions will be made based on scientific merit, relevance to program goals, and potential for extramural support.

**Review Process**

Proposals will be reviewed on an ongoing basis by members of the UK CURE COVID-19 Review Committee.

**Deadline**

The UK CURE COVID-19 Pilot Program is a rolling submission format. Proposals are accepted until program funds are depleted; submissions are reviewed and awards made on an ongoing basis.
Award
Funds will be available for a maximum of six months from date of award and may be renewed with evidence of sufficient progress. Awardees will be asked for a brief final progress report at the end of project.

Questions.
Please contact: Joel Thompson, PhD (Joel.Thompson@uky.edu; 859-323-7939)
