

Neuropathic Pain Study Enrolling Now

Do you have pins and needles, burning, tingling, and/or shooting pain related to the diagnosis of neuropathic pain? Researchers invite individuals to participate in an ongoing research study to treat neuropathic pain. This study will evaluate how a painless, non-invasive brain stimulation technique affects pain and quality of life for people with neuropathic pain after amputation, spinal cord injury, stroke, complex regional pain syndrome, or other causes of nerve injury. This study will require multiple visits over a two-week period with up to \$250 reimbursement plus mileage coverage.

You may be eligible to participate if you have been diagnosed with neuropathic pain and you:

- Are at least 18 years of age;
- Are NOT pregnant;
- Have never had a seizure; and
- Meet other requirements for participation.
