

Have You Experienced a Stroke?

Researchers at the University of Kentucky are conducting a study to explore hand- and finger- movement and finger pressure changes, after someone has experienced a stroke. The study requires a 2-hour visit to the University of Kentucky's campus at the Healthy Kentucky Research Building (HKRB) or Robotics and Manufacturing Building (RMB). If participants are unable to attend this session, they may be asked to return to campus for a make-up session.

You may be eligible to participate if you are:

- between 18 - 80 years old
- more than 2 months post-stroke
- able to sit for prolonged periods of time

Participants will be compensated for their time.
