

Are you Living with Spinal Cord Injury?

Researchers at the University of Kentucky are conducting a study to test the effectiveness of a noninvasive spinal cord stimulation therapy on glucose metabolism among people living with Spinal Cord Injury (SCI), who are prediabetic or have been diagnosed with type 2 diabetes. Participants will have glucose testing with blood draws, use a Continuous Glucose Monitor and complete questionnaires. Stimulation sessions will take place over 12 weeks in the Sachdeva Lab, Department of Physical Medicine and Rehabilitation, located at Cardinal Hill Rehabilitation Hospital.

You may be eligible to participate if you are 18 years or older and:

- are living with SCI (T6 or above)
- are diagnosed with prediabetes or type 2 diabetes
- have NO recent major medication changes for diabetes treatment
